

Loggerhead Turtle Colour by Numbers!

- Loggerhead turtles hatch from eggs in the sand.
- They are found in all the oceans over the world.
- Loggerheads grow up to 1,2 meters (4 feet) in length.
- They eat sea creatures like crabs, clams, sea urchins and even sometimes jellyfish .
- Loggerheads have a lifespan of more than 50 years.
- They are an endangered species because they are caught in commercial fishing nets and their nesting beaches are polluted and some disappearing.
